Spanish

Work Experience

Azure Cloud Engineer - Technical Consultant

Microsoft | August 2021 - Present

My goal is to deliver technical solutions to customers, allowing them to maximize their investment in Microsoft technology, as well as assist customers in the delivery of high quality engagements around Microsoft's solution areas, technologies, services and products in diverse client environments. As a Technical Consultant I also help in the design and development of integrated solutions using the latest Microsoft products, services and technologies and understanding the relevant application development, infrastructure and operations implications of the developed solution.

By focusing in the Azure Cloud and AI Domain, I deliver quality engagements on high profile projects leveraging my expertise as an advisor, reviewer and/or individual contributor to ensure customer value and meet project objectives.

Awarded with the **Microsoft Industry Solutions FY22 H2 Rising Star Award** for performance and learning goals as a Microsoft's new joiner.

Lead Architect

NTT Data | November 2016 - August 2021

I joined NTT Data right off college, with an open mindset I started working in the SharePoint Value Shore as a junior developer. I worked directly with EASO, an European Union managed entity, where I started as developer and within a less than a year I became the project technical lead. In this venture I had the opportunity to travel to EASO's headquarters in Malta to perform the solution deployment and board presentation/demonstration.

Then I worked as technical leader in several projects in Banking, Utilities, Public Administration among others. In these five years I have designed, implemented and delivered digital on-prem and cloud applications, supported teams and helped young developers learn and thrive.

With my experience and quality focus approach, I became an asset in helping organizations achieve their digital goals, from scaling existing applications, to recreate architectures, evolving legacy systems through cloud-adoption and manage IT forums for solution empowerment.

Academic History

Master's in Information Systems and Computer Engineering

Instituto Superior Técnico, Universidade de Lisboa

Specialization in Distributed Systems with minor in Embedded Systems;
Recognized with the 2014/2015 - Academic Excellence Award

Extra-Curricular Activities

Azure and Office 365 Administrator

Non-profit Organization | December 2018 - Present

The main goal was to create an organizational map of all the institution digital resources as well as define the necessary tool adoption to evolve digitally. As the IT responsible, I wanted to ensure that user-friendly and market known tools were adopted, as well as keep the institution budget to a minimum.

With this goal in mind, I successfully registered the organization within the Microsoft Philanthropist program and defined the roadmap for user adoption for Office 365 tools within the organization.

Single handedly configured and deployed the necessary Office 365 configurations, as well as migrated the institution website to the new Azure tenant created. I also managed the user registration and configured all the necessary services and licenses (e.g.: Microsoft E1, Power BI, MFA Service).

Currently I manage the Azure operation as well as the Office 365 services. I also serve as the 1st line proxy for user support.

Volunteer Staff

Microsoft Communities | May 2017 - Present

Served as Volunteered Staff in Community Events such as:

- TUGA IT;
- SharePoint Saturday Lisbon;

My responsibilities varied from Meet and Greet, Attendance registration, Speaker's introduction and presentation and Airport Pick-up and Drop-off.
